

Senior Forward-Deployed Engineer (FDE) (Customer-Facing, Non-Embedded)

Location: Lim Tower 3, Nguyen Dinh Chieu, District 1, Ho Chi Minh city

Website: <https://www.aitomatic.com/>

Type: Full time office

Engineering Focus: AI Cognitive Ontologies, Agentic Applications, Customer Solutions

About the Role:

We are hiring a Senior Forward-Deployed Engineer (FDE) to work directly with customers to design, build, and deploy production-grade agentic applications powered by cognitive ontologies and domain-aware reasoning systems. You will be customer-facing but not embedded—supporting multiple accounts through high-impact technical engagements, architecture design, and implementation of critical solution components.

Responsibilities:

- Lead technical discovery and translate customer workflows into cognitive ontologies, agent logic, and solution architectures.
- Build production-ready components: pipelines, integrations, APIs, domain adapters, reasoning modules.
- Guide customers through deploying, validating, and refining agentic applications using our platform.
- Collaborate closely with product engineering to surface platform gaps and drive improvements.
- Develop reusable patterns, templates, and deployment best practices that scale across customers.
- Provide expert technical guidance during workshops, design sessions, and milestone checkpoints.

Requirements:

- **7 years of hands-on software engineering experience, ideally in customer-facing or solutions engineering roles including at least 2 years working with AI/LLMs in a production environment.**
- Strong software engineering background (**Python or TypeScript preferred**).
- Experience with **distributed systems, data pipelines, APIs, and system integration**.
- Proven experience building AI applications using LLMs, with hands-on experience in AI Agents, Agent Frameworks, or Agentic Workflows and deploy AI agent in the system.
- Solid understanding of modern AI architectures: RAG, AI Agents, orchestration workflows, and tool integration

- Ability to communicate clearly with customer engineering and domain teams.
- Comfortable working across multiple customer accounts with structured engagement cyc

Who You Are:

- A builder who enjoys solving real customer problems with real engineering.
- Equally strong at technical deep dives and customer-facing collaboration.
- Thrives in ambiguity and can convert domain complexity into clean technical solutions.

Before You Apply:

We move fast and we expect a lot. This role probably isn't right for you if:

- You find ambiguity stressful rather than something to resolve
- You prefer to stay in your lane rather than flag problems outside your immediate scope
- You're looking for an engineering role inside a mature structure with a full support team around you

But if you're the kind of engineer who sees a broken integration and can't help but fix it — who treats "we've never built that before" as an invitation rather than a blocker — this is the role you've been looking for.

Why you'll love working here:

- Attractive compensation and benefits commensurate with impact.
- Daily lunch allowance
- Overseas travel opportunities for training and work, providing exposure to international projects and collaborations.
- An employee-centric culture that values skills and abilities, providing the necessary tools and resources to excel and advance in careers.
- A collaborative work environment that fosters teamwork, knowledge sharing, and innovation.
- Flexible working hours.
